

Technical Rider for Chinese Pole Act

A height of 5.5m is necessary, preferably more than 6.5m.

Cables connect the top of the pole to 3 or 4 anchor points which can be in or beneath the floor, or up to 5m above the ground. These cables pull the pole against the ground.

Anchor points must be at least 4m away from the base of the pole.

The anchor points must be rated for at least 250kg. Weights of that mass can also replace the anchor points.

The music is controlled from the stage. For this purpose mini-jack extension (male) is needed from the sound system to the stage.
